

Harderwijk, April 2016

Key Components for material handling:

- Safety Fencing
- Vertical Conveyors
- Palletising Modules
- Stretch Wrappers

Qimarox first to carry 'Rolling On Interroll' label in the Netherlands

Qimarox is the first Dutch partner to join the Rolling On Interroll programme. Rolling On Interroll is the quality label that Qimarox and other partners display on products and systems that are built with the key products of Interroll. This programme was designed by the leading Swiss manufacturer of key products for a select group of partners in the material handling sector for whom, like Interroll, quality is of paramount importance.

The Rolling On Interroll label aims to give end users confidence in the quality of the products used in the often mission-critical equipment and systems. Qimarox also uses components from Interroll in its vertical transport and palletising systems, which are therefore also provided with this label. 'We want to raise awareness among end customers of the quality of these components and the resulting benefits in terms of productivity, safety and innovation,' Interroll states in an explanation of the programme.

Exclusive programme

Admission to the Rolling On Interroll programme is by invitation only. As in the case of Qimarox, admission is reserved exclusively for partners with whom the producer of key products for material handling have a long relationship. Partners, moreover, who develop equipment and systems in which the quality of the Interroll components is critical to ensure high performance, availability and capacity. Interroll wishes to intensify cooperation with these partners, to create an environment in which to share best practices, experience and insights – not only with Interroll, but also with the other partners. This will lead to even more synergies and better products and systems.

Low total cost of ownership

Qimarox develops, produces and supplies components for material handling systems such as product elevators, pallet lifts, palletising systems, ring wrappers and stretch wrappers. The focus is on flexibility and productivity, in combination with a low total cost of ownership. The standard components of Interroll contribute to this. They provide not only high performance but are also durable and require little maintenance.

About Qimarox

Qimarox is a leading manufacturer of components for material handling systems characterised by ruggedness and reliability. Innovative concepts, patented technologies, and continuous development allow Qimarox to manufacture product lifts, palletisers and packaging machines that combine flexibility and productivity with a low total cost of ownership. System integrators and original equipment manufacturers from across the globe use the machinery of Qimarox in end-of-line systems and storage and order picking systems in various industries.
